

Ironbridge
CANDLE COMPANY

PILLAR CANDLE
CARE INSTRUCTIONS

BEFORE BURNING

Remove
Sleeve

Trim Wick to 5mm if
not already trimmed

Place candle on a candle
plate/tray/dish (Ideally one
that can catch any drips)

IMPORTANT NOTE

If you leave your candle unattended for more than 4 hours,
the candle may split on one side & seep wax.

You can burn the candle longer than 4 hours, but
you will need to maintain the wick with regular
trimming and keeping the wick central.

By following our instructions, your candle will burn
evenly, smell beautiful and will consume all the wax. You will
be left with a little stub of wax which is natural as you
get to the end of the candle. You can use the left-over
wax in a wax burner for continued scent.

DURING BURNING

1. Do not leave the candle unattended
2. Burn for up to 4 hours
3. If your wick leans over too much use a
metal object (Cutlery) to nudge the
wick back to its centre point
4. Trim your wick between burns
5. Keep away from drafts
